EXPERIENCE

Self-Employed, Remote — *Mobile Engineer*

April 2017 - PRESENT

Helped many startups around the world designing, implementing and submitting their Swift, Objective-C React-Native, React Apps and MVPs. And also acted as fullStack, team lead and CTO.

For Roo - San Francisco, USA: Building from scratch the mobile version of the Roo.vet platform - TypeScript/React-Native

For Storey - San Francisco, USA: Refactored all the code base of the StoreyApp, built the Android version and new features - React-Native

For Thinkful (Chegg service) - New York City, USA: Web/FullStack Development Mentor

For Gameloft/FreshPlanet - Montreal, Canada/NYC, USA: Build and lead a mobile team of React Native developers. Maintained and implemented different features for SongPopLive (2020 Webby Award, People's Voice Winner, Games/Puzzle category). Prototyped the Generic Trivia version of SongPop Live game app. Created some features of SongPop3 a successful Music Trivia Game for iOS and Android - React Native/Graphql

For Crown Thrown - San Francisco, USA: Developed the CrownLeague a professional fantasy football league app (not launched yet) - React Native/Firebase/GetStream

For Validity Labs - Zug, Switzerland: Developed Mio a decentralized dating app MVP - React Native/Firebase

For KarmaList - Berlin, Germany: CTO for a Review Platform startup idea based on Blockchain. Helped to mature the idea and write the White Paper

For P22 Studio - Auckland, New Zealand: Maintained Hear App, an augment audio experience hybrid app - React Native/Obj-C - and Slice App, an animated art photo concept app - Obj-C

For David's Bridal - Dallas, USA: Designed and implemented internal app to manage David's Bridal stores' appointments and clients - Swift 3

Keaton Row, San Francisco, USA — *Mobile Engineer*

April 2015 - April 2017

Designed, implemented Objective-C chat and shopping app. Built and maintained some node.js APIs and Angular web based features. Conducted multi-platform Quality Assurance tests.

In-Depth, San Francisco, USA — *Mobile Software Engineer*

December 2014 - March 2015

Improved the scale and performance of the backend stack to tackle the processing and storing of terabytes of unstructured data.
